

Axis Camera Surveillance Software System

Spy on your closest friends

Client Software

Overview

Two cameras simultaneously

- The Client software is able to connect to two different cameras.
- Connect and disconnect the two cameras individually.
- In the future: Even more cameras!

Images via HTTP

- Every camera server also runs a complimentary http server.
- Provides possibility to grab images via the http protocol from virtually anywhere!
- Grabbing images from the webbrowser does not interfere with the regular image stream.

Synchronous displaying of images

- Images will be displayed in the right order, regardless of delays in the network.
- When large delays appear in the network, images will be displayed on a FIFO basis.

Motion detection for dynamic refresh rate

- Supports 2 different refresh rates.
- Never burden your network when there's nothing of interest to show.
- The software will intelligently switch to active mode when the camera has detected a motion.
